

Step-by-Step Screenshot Report

Automatically compiled from the uploaded screenshots.

Step 1

This screenshot represents step 1 in the workflow. Review the image and perform the action shown before proceeding to the next step.

Step 2

This screenshot represents step 2 in the workflow. Review the image and perform the action shown before proceeding to the next step.

The screenshot displays the AWS Management Console interface for the 'Launch an instance' step. The browser address bar shows the URL: `https://ap-northeast-2.console.aws.amazon.com/ec2/home?region=ap-northeast-2#LaunchInstances`. The console header includes the AWS logo, a search bar, and navigation icons. The main content area is titled 'Launch an instance' and features a grid of operating system tiles: Amazon Linux, macOS, Ubuntu, Windows, Red Hat, SUSE Linux, and Debian. The 'Amazon Linux' tile is selected, showing details for the 'Amazon Linux 2023 kernel-6.18 AMI' (AMI ID: ami-08c64967154312fa5). The description states: 'Amazon Linux 2023 (kernel-6.18) is a modern, general purpose Linux-based OS that will be supported until June 2029. It is optimized for AWS and designed to provide a secure, stable and high-performance execution environment to develop and run your cloud applications.' Below the description, a table lists the instance configuration: Architecture (64-bit (x86)), Boot mode (uefi-preferred), AMI ID (ami-08c64967154312fa5), Publish Date (2026-07-10), and Username (ec2-user). A 'Verified provider' badge is visible next to the username. On the right side, a 'Summary' panel shows the number of instances (1), the software image (Amazon Linux 2023 AMI 2023.12...), the virtual server type (t3.micro), the firewall (New security group), and the storage (1 volume(s) - 8 GiB). At the bottom of the summary panel, there are 'Cancel', 'Launch instance', and 'Preview code' buttons. The footer of the console shows the date and time (11:22 13-07-2026) and the user's location (Asia Pacific (Seoul)).

Step 3

This screenshot represents step 3 in the workflow. Review the image and perform the action shown before proceeding to the next step.

The screenshot shows the AWS Management Console 'Launch an instance' page. The browser address bar displays the URL: `https://ap-northeast-2.console.aws.amazon.com/ec2/home?region=ap-northeast-2#LaunchInstances:`. The page is titled 'Launch an instance' and is part of the 'EC2 > Instances' navigation path. The user is logged in as 'Prattyush Awasthi' with the account ID '619964165376'.

The page is divided into two main sections: configuration on the left and a summary on the right.

Key pair (login) section:

- Text: 'You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.'
- Field: 'Key pair name - required' with a dropdown menu showing 'keypair1' and a 'Create new key pair' link.

Network settings section:

- Text: 'Network' with a value of 'vpc-015772ea66bdf3d0'.
- Text: 'Subnet' with a value of 'No preference (Default subnet in any availability zone)'.
- Text: 'Auto-assign public IP' with a value of 'Enable'.
- Firewall (security groups)** section:
 - Text: 'A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.'
 - Buttons: 'Create security group' (selected) and 'Select existing security group'.
 - Text: 'We'll create a new security group called 'launch-wizard-3' with the following rules:'
 - Checkboxes: 'Allow SSH traffic from' (checked) and 'Anywhere' (selected).

Summary section:

- Text: 'Number of instances' with a value of '1'.
- Text: 'Software Image (AMI)' with a value of 'Amazon Linux 2023 AMI 2023.12....read more'.
- Text: 'Virtual server type (instance type)' with a value of 't3.micro'.
- Text: 'Firewall (security group)' with a value of 'New security group'.
- Text: 'Storage (volumes)' with a value of '1 volume(s) - 8 GiB'.
- Buttons: 'Cancel' and 'Launch instance' (highlighted in orange).
- Link: 'Preview code'.

The bottom of the page shows the AWS footer with copyright information: '© 2026, Amazon Web Services, Inc. or its affiliates.' and links for 'Privacy', 'Terms', and 'Cookie preferences'. The system tray at the bottom indicates the date and time as '11:23 13-07-2026'.

Step 4

This screenshot represents step 4 in the workflow. Review the image and perform the action shown before proceeding to the next step.

Step 5

This screenshot represents step 5 in the workflow. Review the image and perform the action shown before proceeding to the next step.

Step 6

This screenshot represents step 6 in the workflow. Review the image and perform the action shown before proceeding to the next step.

The screenshot shows the AWS Management Console interface for launching an EC2 instance. The browser address bar indicates the URL: `https://ap-northeast-2.console.aws.amazon.com/ec2/home?region=ap-northeast-2#LaunchInstances`. The console header shows the user is logged in as Pratyush Awasthi in the Asia Pacific (Seoul) region.

The main content area is titled "Launch an instance" and includes a "Recents" tab and a "Quick Start" section. The "Quick Start" section displays a grid of operating system options: Amazon Linux, macOS, Ubuntu, Windows, Red Hat, SUSE Linux, and Debian. The "Amazon Linux" option is selected.

The "Amazon Machine Image (AMI)" section shows the selected AMI: "Amazon Linux 2023 kernel-6.18 AMI" (ami-08c64967154312fa5). The description states: "Amazon Linux 2023 (kernel-6.18) is a modern, general purpose Linux-based OS that will be supported until June 2029. It is optimized for AWS and designed to provide a secure, stable and high-performance execution environment to develop and run your cloud applications." The AMI ID is ami-08c64967154312fa5, published on 2026-07-10, and the username is ec2-user.

The "Summary" panel on the right provides a overview of the configuration:

- Number of instances:** 1
- Software Image (AMI):** Amazon Linux 2023 AMI 2023.12.....read more
- Virtual server type (instance type):** t3.micro
- Firewall (security):** New security group
- Storage (volume):** 1 volume(s) - 8 Gi

A "Snipping Tool" window is open in the foreground, displaying a screenshot of the console and a message: "Screenshot copied to clipboard. Automatically saved to screenshots folder." The tool also includes a "Mark-up and share" button.

Step 7

This screenshot represents step 7 in the workflow. Review the image and perform the action shown before proceeding to the next step.

Step 8

This screenshot represents step 8 in the workflow. Review the image and perform the action shown before proceeding to the next step.

Step 9

This screenshot represents step 9 in the workflow. Review the image and perform the action shown before proceeding to the next step.

The screenshot shows a terminal window within the AWS CloudShell interface. The terminal displays the following commands and output:

```
Amazon Linux 2023
https://aws.amazon.com/linux/amazon-linux-2023

[ec2-user@ip-172-31-33-134 ~]$ sudo su

Step 13

This screenshot represents step 13 in the workflow. Review the image and perform the action shown before proceeding to the next step.

The screenshot displays the AWS Management Console interface for the 'Instances' page in the 'ap-northeast-2' region. The left sidebar shows the navigation menu with categories like EC2, Images, and Elastic Block Store. The main content area, titled 'Instances (2)', shows a table of two running EC2 instances. The table columns include Name, Instance ID, Instance state, Instance type, Status check, Availability Zone, and Public IPv4 DNS. Both instances, 'web-server-2' and 'web-server-1', are in a 'Running' state with '3/3 checks passed'. Below the table, there is a 'Select an instance' section. The bottom of the screen shows the Windows taskbar with various application icons and system information like temperature and time.

Name	Instance ID	Instance state	Instance type	Status check	Availability Zone	Public IPv4 DNS
web-server-2	i-07e9a5d76eeec9ddf	Running	t3.micro	3/3 checks passed	ap-northeast-2c	ec2-13-125-125-43.ap-...
web-server-1	i-0e897592d5d428a4a	Running	t3.micro	3/3 checks passed	ap-northeast-2c	ec2-13-125-90-254.ap-...

EC2 > Load balancers > Create Classic Load Balancer

1-65535

Add instances

Select EC2 instances to register to your load balancer. Requests will be routed to registered instances that meet the health check requirements. For maximum fault tolerance, we recommend maintaining approximately equivalent numbers of instances in each Availability Zone enabled for the load balancer. If demand on your instances changes, you can register or deregister instances without disrupting the flow of requests to your application. [Learn more](#)
